Master Keying System

Keyed to differ
All keys are individual and stand alone. Each lock can only be opened by its own individual key.

Keyed alike
It allows for a number of locks to be operated by the same key as they are keyed to a specific code. This system is particularly suitable for residential applications with front and back doors.

Master keyed
This system allows locks in a group to be keyed individually and does not allow those individual keys to operate any other lock in the system. However all locks in the system can be operated by one Master Key.

Grand master key
With this system locks in several groups are independently keyed with a Master Key for each group. Each group is independent of each other, and the Grand Master Key will work with all locks in all groups.

Maison keying
A maison key system is a keying system that allows a lock to be opened with a number of unique individual keys. Typically found in applications like apartment buildings, it provides unrestricted access to common doors. Unlike Master Keyed systems, the lack of security makes this a less attractive option.
