# Brio

## Pro Run

### Top Hung Straight Sliding System

The Brio Pro Run is a professional range of top hung straight sliding system for panels weighing from 120kg to 400kg. The system offers many innovative features which make it versatile, easier and safer to install, smoother to operate and superior in performance.

Featuring stainless steel hanger body construction, stainless steel precision bearings and anodised aluminium tracks, this system is developed for both interior and exterior applications. The multiple bracket and guide options for timber and aluminium panels make Brio Pro Run a versatile solution.

Brio Pro Run systems are supplied with a dampener door stop which significantly reduces the risk of finger entrapment and improves longevity of the overall system. Soft close options are available in Brio Pro Run for panels as heavy as 300kg. Applications can use soft close on both ends or pair with a dampener stop.

End caps and fascia options for tracks complete the range and help blend the installation into the surrounding architecture.

#### **Features**

- Stainless steel bearings and hanger body construction for interior and exterior use
- Conical wheels with large, precision bearings for silent, finger-tip operation
- Additional side thrust bearings ensure straight sliding and smooth operation
- Stainless steel hanger bolt with anti-slip locking mechanism
- One hanger for all plates for convenient installation
- Innovative latching and locking mechanism on brackets for easy installation
- Surface or recessed mounted and corner brackets for timber installations
- Recess mounted and long bolt brackets for specific use in aluminium applications
- Dampener stop to smoothly and safely stop panels, offered as default door stop
- Robust soft closer design for high weight capacity up to 300kg panels
- Flexible trigger on soft close to eliminate the requirement of priming before installation
- End caps and fascia available for clean look
- Compatible with existing Brio floor guides and channels
- Tested to 100,000 cycles

## **Specifications**

Panel type	Timber, aluminium and steel frame panels
Panel height	Maximum 3000mm
Panel width	With 2 dampener stops - 500mm minimum With 1 dampener stop and 1 soft close - 750 minimum With 2 soft closes - 1200mm minimum
Panel thickness	40mm to 60mm
Panel weight	120kg to 400kg
Tracks	
Weight capacity	Up to 200kg for 200F track Up to 400kg for 400F and 400E track
Material	Aluminium
Finish	Clear anodised
Standard lengths	2m, 3m, 4m and 6m
Hangers	
Weight capacity	Up to 400kg
Material	SS body, SS bearings and nylon tyres*
Dampener stop	
Weight capacity	Up to 200kg for 200-DS 201 to 400kg for 400-DS
Material	SS and polymer construction
Compression	Hydraulic with 20mm dampener compression
Soft close	
Weight capacity	Up to 200kg for 200-SC 201 to 300kg for 300-SC
Material	SS and polymer construction
Compression	Spring loaded with 70mm compression
Priming	Priming not required before installation
Guides	
Bottom guides	Multiple guide options for various applications available
Channels	
Material	Aluminium and aluminium with polypropylene lining channels available
Standard length	2m, 3m, 4m and 6m
Accessories	
Brackets	Face fitted and double face fitted SS brackets available
Door collectors	Available for stacked panel installations
Kits	Accessory kits available for simultaneous and telescopic operations for multiple panel installations
End caps	End caps available for all track options End caps available to use with fascia for 400E track

<sup>\*</sup>Hangers supplied in pairs with timber screws, fixing plates and nylon tyre bearings. Nylon tyre wheels should not be used on installations involving temperatures exceeding 80degC  $\,$
