

Brio[®]

LOCKING SOLUTIONS

For sliding and folding systems

Brio[®]
where ideas unfold

Brio stands for high-quality, sliding and folding door hardware which is expertly designed, assembled and tested, in Australia. Our products breathe light into buildings by bringing the outdoors in, opening up spaces and creating havens.

We have a passion for turning design ideas into functional solutions, whether connecting living spaces with beautiful vistas or providing flexible work areas for classrooms and offices.

As part of the Allegion family of brands, Brio has local expertise backed by global resources which is why Brio is a leader in door hardware solutions. It is why we are the trusted choice time after time.

Locking solutions

Choosing the right locking solution for sliding and folding door systems ensures both security and convenience of operation in residential and commercial spaces. Unlike traditional door locks, these solutions must accommodate doors which slide horizontally or fold inward or outward, requiring specific design which secures multiple panels simultaneously.

Brio provides expertly designed locking solutions for sliding and folding doors, working seamlessly with their Weatherfold ranges and top hung or bottom rolling sliding systems, such as Pro Run and Timberoll. Austral Lock, another market leader from the Allegion family of brands, also provides elegant solutions with secure locking. Their local manufacturing in Australia, ensures various kits can be supplied quickly for any sliding and folding application.

286 non-locking, locking and 288 lever furniture

Dual Point Locking

As architectural design increasingly highlights doors as key focal points, their size, especially height, has grown significantly. In response, Brio developed the 286 Dual Point Lock which throws a 25mm bolt top and bottom with a single action of a lever positioned ergonomically on the door. Designed specifically for Brio's Weatherfold ranges, the 286 accommodates timber and aluminium panels and can also be used on single hinge and French doors up to 3.5m high.

Complimenting the 286, Brio offers a matching 288 lever handle for swing doors, designed to operate with Austral Lock's Virtus mortice hinge door lock. This collaboration allows integration with various door furniture for Brio's exterior bifold products. The Forge range is available in any powder coat colour from Interpon[®] or Dulux[®], while the Aurora offers a DDA compliant lever option. For a premium finish, the stainless steel Verta range is offered in satin stainless or PVD black. All three levers provide multiple locking configurations including a privacy turn snib.

Mortice Sliding Locking

The Austral Lock range also includes a mortice sliding door lock which features double hook bolts and anti slam technology to protect the lock from damage by disabling locking unless the panel is in the closed position. This lock body has a 28.5 or 40mm backset and is compatible with Austral Lock's Forge and Verta range of flush, inline and offset pulls. These products are the perfect locking solution for Brio's Quick Run 120, Pro Run 200 & 400 or Timberoll, 100, 200 or 300N. Style, ease and performance from roller to lever, for a complete system.

360, 512, 456 and 213 flush bolts

Flush Bolts

For a more traditional approach to locking, Brio offers several flush bolt solutions for windows, doors and shutters, in either folding or sliding applications. The 360 and 456 series offer a solid brass substrate with locking and non-locking configurations for timber windows and doors, available in several lengths to ensure comfort and convenience when securing panels.

Windows made by Stegbar

Brio's 512 series is designed specifically for aluminium panels and performs well in coastal areas with its 316 stainless steel construction.

The 213 Shutterbolt uses an innovative self-locking design for aluminium shutters. When the bolt is not being operated for easy sliding of the panel, its spring loaded throw bolt automatically engages with holes in the bottom channel to ensure secure locking, every time.
